VII. Certain defects in the international application

The following defects in the form or contents of the international application have been noted: see separate sheet

Re Item V

Reasoned statement under Article 35(2) PCT with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Reference is made to the following documents cited in the international search 1) report:

D1: EP-A-0 483 895 (FIAT AUTO)

D2: US-A-5 822 927 (HELLENKAMP)

D3: US-A-4 416 088 (FEUCHT)

- The document D1, which is considered to represent the most relevant state of the 2) art, discloses (the references in parentheses applying to this document) a hollowinterior vehicle door (column 2, lines 1-41 and figures 1 and 3) consisting of an internal in its entirety essentially pot-shaped or pan-shaped stiffening structure (12 and 13) and of at least one external outer panel element (14) being essentially lidshaped and supported by the essentially pot-shaped or pan-shaped stiffening structure, such as a door skin, as well as of functional parts for practicing the door functions, in which the essentially pot-shaped or pan-shaped stiffening structure
 - a) serves to accommodate functional parts of the vehicle door, such as a hinge (22) and
 - b) has an access opening, such as a service opening into the door interior defined by one outer panel element (14) and the essentially pot-shaped or pan-shaped stiffening structure (12 and 13), wherein
 - c) the essentially pot-shaped or pan-shaped stiffening structure is divided into two parts, in fact,
 - d) into a first stiffening element (13) for supporting the outer panel element (14) and
 - e) into a second essentially pot-shaped or pan-shaped stiffening element (12) for supporting functional parts of the vehicle door and that
 - the two stiffening elements (12, 13) have, in the area of the outward-pointing, thus in Y-direction pointing, side walls of the door interior, elongated connecting surfaces which define the access opening to the door interior (figure 3).

A vehicle door according to claim 1 of the present application only differs from the vehicle door known from D1 in that the first stiffening element for supporting the

outer panel is a frame-shaped (i.e. ring-shaped) element.

From D3, an hollow-interior vehicle door which has a frame-shaped stiffening element supporting the outer panel element of the door is known (element (32) in figure 3 of D3; see column 33, lines 36-39).

In case a vehicle door with an increased interior depth would be sought, the skilled person would regard it as a normal design possibility to include the frame-shaped stiffening element known from D3 in the vehicle door described in document D1. The subject-matter according to claim 1 of the present application does not therefore involve an inventive step in the sense of Article 33(3) PCT.

- 3) Dependent claims 2-8 do not contain any features which, in combination with the features of any claim to which they refer, meet the requirements of the PCT in respect of inventive step (Article 33(3) PCT), the reasons being as follows:
 - a) The technical features of claim 2 are known from D2 (window frame (34) supported by the inner panel (28) see column 6, lines 44-49 and figure 6).
 - b) The technical features of claim 3 are known from D1 (figure 3) and D3 (figure 3).
 - c) The technical features of claim 4 are known from D3 (figure 3).
 - d) The features of claims 5-8 are merely straightforward possibilities that the skilled person would select, in accordance with circumstances, without the exercise of inventive skill.

Moreover, it would be obvious for the skilled person without the exercise of an inventive step to combine the above features known from documents D1-D3, thereby to arrive at the vehicle door of the claims 2-8.

R It m VI

Certain documents cited

The following published document (Rule 70.10) discloses all the technical features according to claim 1 of the present application:

| Application No | Publication date | Filing date | Priority date | |
|----------------|------------------|------------------|------------------|--|
| Patent No | (day/month/year) | (day/month/year) | (day/month/year) | |
| EP 0 983 890 | 08.03.2000 | 30.08.1999 | | |

Re Item VII

Certain defects in the international application

- 1) The features of the preamble of claim 1 are not provided with reference signs placed in parentheses as required by Rule 6.2(b) PCT.
- 2) Contrary to the requirements of Rule 11.13(I) PCT, the reference symbols (1A) and (1B) do not appear in the description.
- 3) Contrary to the requirements of Rule 5.1(a)(ii) PCT, the relevant background art disclosed in the documents D1-D3 is not mentioned in the description, nor are these documents identified therein.
